Communications Applications Solutions

ANDTEK offers IP phone and desktop applications to support your communications needs.

AND Phone Solutions

AND Phone Group shows you the status of other phones to know in real-time if calls can be forwarded and enables you to pick incoming calls by the touch of a button.

AND Phone Broadcast delivers zone paging to thousands of IP phones, emergency broadcasting and conferencing services for your corporate network.

AND Phone Directory integrates your SQL databases, LDAP directories and various other files into your communications network. Search multiple corporate directories at once and dial immediately from the IP phone. Incoming calls are resolved and detailed caller information is displayed to show you who is calling before you pick the call.

AND Phone Lockout prevents IP phone misuse by limiting the calling possibilities of IP phones, e.g. to emergency numbers only. Even in the locked state the phone is reachable.

AND Phone Recorder delivers high-scalable voice recording from one call up to thousands of recorded calls. Simple replay of recorded calls is possible over the web or the IP phone.

AND Phone Observer integrates IP cameras and door openers into your unified communications environment.

Additional services to leverage your communications systems are available on request, like **alarm clocks, weather reports, block lists, graphical service display** and many more.

AND Desktop

IP Phone control application offering you **click-to-dial** from any Windows application and integrates into **MS Outlook** for faster dialing.

AND Communicator

Softphone for **Windows, Mac OS and Linux** desktops offering simple and powerful communications services.
